## Poster competition entries

[michael.schimmelpfennig@anu.edu.au](mailto:michael.schimmelpfennig@anu.edu.au)

The first of its kind in Australia to examine the scope of state-of-the-art computerized textual analysis of traditional Chinese texts, this workshop will bring together distinguished international experts in the combined fields of Chinese studies and Digital Humanities (DH).

These experts will generally explore their particular areas of expertise in digital text analysis. This will be followed by sessions devoted to the more specific question of how to digitally analyse multi-layered Chinese texts, such as texts with commentaries.

The final day aims to provide a forum for students and early career researchers to present their own DH projects in the form of poster sessions and discuss them with the experts. The best five presenters will receive small grants in support of their participation.

Presented by:

ANU College of  
Asia & the Pacific  
School of  
Culture, History & Language
